the constrained discrete variables of the problem and constraints of the variables, each variable having a referenced set of possible states;

the messages comprising a message containing a set of probabilities for various patterns of warning for the variable, a warning giving information on whether the various assignments from the set of possible states of the variable are compatible with the constraints involving the variables;

calculating a probability of the variable ... based on the messages delivered in order to compute a degree of polarization of the variable to know to what degree the most favorable assignment of the variable is better than all other possible assignments of the variable;

means for assigning at least one of the variable a state from its set of possible states according to the computed degrees of polarization, for simplifying the problem; and

means for recursively using means for constructing the data structure, delivering messages, calculating probabilities, and assigning until at least all the variables have been assigned for providing a solution to the problem.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
